

Platines personnalisées séries D5000/D6000

Honeywell SM et SM-SC

Ces platines avec (TBE) ou sans (TB) boîtier métallique permettent de relier directement la carte E/S du système et les modules des séries D5000 et D6000 qui s'interface avec le terrain. La protection de sécurité intrinsèque et l'isolation du signal entre la Zone sûre et la Zone dangereuse sont assurées par les appareils associés de la série D5000. L'alimentation 24 Vcc de la platine est connectée à deux bornes enfichables, pour une alimentation redondante. Les alimentations hors plage et les défauts cumulés du module peuvent être surveillés via un contact dédié. Les modules sont alimentés via le bus d'alimentation de la Platine. Les platines sont fournies avec un kit de montage universel pour mur et rail DIN, tandis que les TBE peuvent être montées sur rail DIN avec des clips en plastique ou en métal, selon l'accessoire choisi.
